

Digital summary of transportation concept for Aarau

Our transportation experts worked out a general transportation concept for the region of Aarau. Our EBP communications team then drafted a summary of the 80-page report to give business leaders, lawmakers, municipal representatives, and the general public a brief introduction to the main strategic considerations addressed in the concept. Taking a digital approach, we created the summary in a manner that allowed us to conveniently integrate it into the Canton of Aargau's existing website. We also edited the contents with an eye to accessibility and visual appeal. The digital outline effectively enables the target groups to gain quick access to clear presentation of the concept.

Client

Canton of Aargau, Department of Building, Transportation, and the Environment

Facts
