

Concept for corporate carbon pricing

A major Swiss service company faced the question of whether and how to best introduce an internal carbon-pricing mechanism. Internal carbon pricing involves assigning an internal price per ton of CO_{2e} to its fuel, investment, and materials expenses. The aim of doing so is to incentivize the procurement of climate-friendly goods and services.

Working together with BSD Consulting, we drafted a carbon-pricing concept and analyzed various alternative versions and possibilities in terms of their advantages and disadvantages.

Our services

- Drafting of a concept for a corporate carbon pricing model
- Analysis of existing models, including corresponding prices per ton of CO_{2e}
- Drafting of recommendations for the implementation of a corporate carbon pricing model

Client

Swiss service company

Facts

Period	2016 - 2017
