

Low-Carbon & Climate Resilient Water and Wastewater Management

EBP supported the GIZ with the conceptual design and preparation of a project proposal for funding from the International Climate Initiative that would make South Africa's water and wastewater sector more resilient to climate change. The project introduces adaptation and energy efficiency measures that contribute to realizing national climate change objectives and responds to vulnerable groups' development needs. The project has been commissioned and is under implementation by GIZ.

Our services

- Conducting project appraisal missions
- Preparing project proposals in accordance with the requirements of international climate financing sources

Client

GIZ GmbH

Facts

Period 2021 - 2022
