

# Enhancement the City of Zurich's Energy Map

**The City of Zurich is aiming for a net-zero climate target by 2040. We were commissioned to expand the city's existing digital energy map EnerGIS to facilitate the transition to renewable heating in Zurich. We iteratively developed and implemented the map using user-centred design (UCD). Within this scope, we added available types of renewable energy, recommendations for heating systems and comparable examples in the neighbourhood.**

## Our services

- Facilitating workshops and interviews
- Identifying the relevant target groups
- Concept and prototyping
- Usability testing
- Visual design
- Implementing a WebGIS application according to OGC standards
- Developing with Angular, Angular Material, Java and QGIS Server
- Visualizing and interacting with maps via QGIS Server in combination with OpenLayers
- Optimizing according to WCAG 2.1 standards for accessibility

## Client

Zurich Environment and Health Protection Agency

## Facts

Period 2021 - 2023

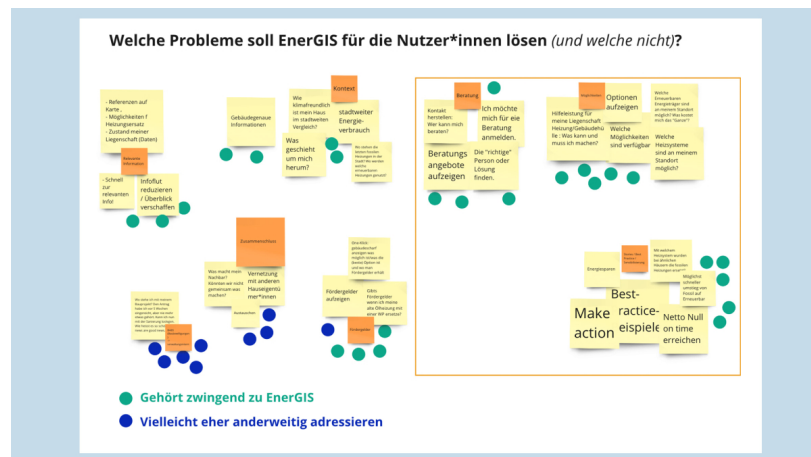

Project Country Switzerland
